Mr. Nelson Erickson  
National Highway Traffic Safety Admin.  
400 Seventh Street, S. W.  
Washington, D. C. 20590

Dear Mr. Nelson:

Thanks for sending me the materials for the Vehicle Identification Number standards so promptly.

I have attached a copy of the format we plan to use for our trailers. We also manufacture self propelled off-road harvest equipment. I'd like to know if these can also be serialized with a standard VIN.

All equipment we manufacture is used in our own company and not sold. Since we operate throughout the state and many machines remain in remote fields overnight, I'd like to give them additional security identification.

Your time and consideration is most appreciated.

Sincerely,

*Steve Cosh*

Attn: VIN Coordinator

Please find below the format we plan to use for our trailers. To date, we have only assigned numbers to two vehicles being produced. They are:

1B9P20200ES079551

1B9P20202ES079552

All of our trailers will be manufactured in our Salinas, California facility. Our sequence number will be in order according to the type of trailer. We will use the standard symbol for year of manufacture rather than model year since there will be few changes for several years. We will also use standard numbers for trailer length and axles.

For any questions concerning BUD ANTLE, INC. equipment, please contact:
